

## Plan of the Day for Saturday, 1 June 2013

Submitted by tjlang on Sat, 06/01/2013 - 09:56

Date:

Saturday, June 1, 2013 - 09:45

Discussion:

Today IFloodS will operate in anticipation of expected showers and weak thunderstorms this afternoon and evening, as a low pressure system moves through our domain. Sunday (and likely Monday) will be dry due to an incoming ridge so a hard down day from 7 am CDT Sunday through 7 am CDT Monday has been called. There will be no morning forecast, mission scientist reports, or telecon briefings on Sunday, and NPOL will not be staffed Sunday 7 am thru at least 7 am Monday morning. If anything changes significantly with instrument status during this down period, please contact Timothy Lang (970-692-4783, [timothyj.lang@nasa.gov](mailto:timothyj.lang@nasa.gov)). Morning briefings/forecasts will begin again on Monday morning at the normally scheduled time. A final decision on Monday operations will be made then. We expect full IFloodS operations from Tuesday onward.
